Clobazam :

Clobazam: tablets 10mg. Frisium: tablets 10mg. Tapclob: oral liquid suspension 5mg/5ml, 10mg/5ml.

Antiepileptic Drugs – Side Effects

Carbamazepine :

Skin rash. Dry mouth, nausea, vomiting, fluid retention, unsteadiness, dizziness, drowsiness, fatigue, headache, low sodium in the blood, blood disorders, dermatitis, and hives. Blurred vision, double vision, dizziness and unsteadiness to start with or if dose is too high. Confusion and agitation.

Lamotrigine :

Serious skin rash and hypersensitivity risk minimised with slow introduction. Nausea, vomiting, diarrhoea, headache, fatigue, dizziness, sleep disturbance. Tremor when taken with sodium valproate may reduce as dose is changed.

Valproate :

Hair loss – not usually severe and is usually reversible if the dose is reduced. Nausea, stomach upset, diarrhoea, and weight gain (due to increased appetite). Hyperactivity and behaviour problems. Has been associated with polycystic ovaries and menstrual problems. TERATOGENICITY.

Ethosuximide :

Headache, drowsiness, nausea, vomiting, diarrhoea, abdominal pain and anorexia.

Levetiracetam :

Rash. Headache, drowsiness, dizziness, weight loss and pins and needles. Slowed thought and speech may occur. Some cases of eye problems have been reported within one month of starting treatment.

Topiramate :

Rash. Headache, drowsiness, dizziness, weight loss and pins and needles. Slowed thought and speech may occur. Some cases of eye problems have been reported within one month of starting treatment.

Clobazam :

Light-headedness, confusion, ataxia (shaky movements) and irritability. Drowsiness can occur.
